Manual QA Checklist

Ticket POS, Pooja Booking (POS / Portal / Public) — print this and tick each box as you verify it on test.hasq.org. Group headers show what each section covers.

1. Ticket POS — Archana Ticket Sale

Payment (Cash / Bank / Card), printing, and reprint.

- [ ] Log in to the Ticket POS and confirm the Archana view loads with all active ticket types shown as tiles.
- [ ] Use the search box and category filter chips above the grid — confirm both narrow the tiles shown and the search box sits first in the row.
- [ ] Tap a ticket tile and confirm the quantity popup opens, showing the correct name and unit price.
- [ ] Increase/decrease the quantity with +/- and confirm the circular icon buttons are clear and easy to tap.
- [ ] Confirm "Add to Order" places the item in the cart and the cart total updates correctly.
- [ ] Add a second, different ticket type and confirm both lines and the combined total are correct.
- [ ] Confirm the cart panel extends to the full height of the screen, with the order list scrolling independently and the payment method / PAY button staying pinned at the bottom.
- [ ] Select Cash, enter an optional customer name/mobile, and complete the sale.
  Confirm the sale completes, the cart clears, and a receipt print view opens.
- [ ] Repeat a sale selecting Bank as the payment method.
  Confirm the sale records correctly with Bank as the method.
- [ ] Repeat a sale selecting Card.
  Confirm the PAY button shows the live total AND the specific terminal name underneath (e.g. "on Terminal 1 Terminal").
- [ ] Start a Card payment, then immediately press Cancel Payment before the terminal responds.
  Confirm the PAY button is re-enabled right away and does NOT stay stuck spinning.
- [ ] Start a Card payment, let it reach the terminal, then press Cancel Payment.
  Confirm the modal shows "Cancelling…" and eventually closes, and the PAY button is re-enabled (not stuck on a spinner) once it does.
- [ ] Complete a Card payment fully on the terminal.
  Confirm it shows PAYMENT APPROVED, then opens/auto-prints the receipt and clears the cart.
- [ ] On the printed/opened receipt, confirm the thermal stub shows: temple name, ticket name, price, order number, and a unique stub number per ticket.
- [ ] If your printer uses 58mm paper, use the width picker on the print view and confirm the stub re-lays-out correctly.

2. Ticket POS — Order View & Reprint

Finding a past sale and reprinting its receipt from the Till view.

- [ ] From the side nav, open the Till view and confirm it shows the live Opening/Received/Expected summary and the Settle Till form without any popup.

- [ ] In Current Period Transactions, locate the order you sold in Section 1.
- [ ] Click anywhere on that order’s row (not just an icon) and confirm a popup opens.
- [ ] In that popup, confirm the left side lists the order date, customer, payment method, EACH individual ticket line item with quantity, and the total.
- [ ] Confirm the right side shows the real receipt embedded and loading (with a brief spinner, not a blank panel) before it appears.
- [ ] Click "Print Receipt" inside the popup and confirm it reprints correctly.
- [ ] Close the popup by clicking outside it, and separately test the dedicated Print icon on the row — confirm it also opens/reprints the same receipt.
- [ ] Use the search box above the transactions table to find the same order by customer name or order number.

3. Ticket POS — Pooja Booking

Creating a booking at the counter, including Custom Pooja and all three payment methods.

- [ ] From the side nav, switch to the Poojas view and confirm the grid/table toggle sits next to the "Pooja Bookings" title.
- [ ] Switch to Table view and confirm poojas list with name, description, price in a table instead of tiles; switch back to Grid view.
- [ ] Use the Recent tab (if any poojas have been booked before) and confirm it shows the most recently booked poojas first.
- [ ] Tap a regular pooja tile/row and confirm the Book Pooja popup opens with that pooja pre-filled.
- [ ] Fill in booking date, time, and leave Priest on Auto-assign.
- [ ] Fill in devotee name, mobile, email.
- [ ] Enter something in Participant Details — e.g. a second family member’s name, gothram and nakshatram.
- [ ] Confirm the three payment buttons (Cash / Bank / Card) are equal width, sitting directly above the Create Booking button.
- [ ] Select Cash and submit.
  Confirm a "Booking Confirmed" POPUP appears (not a small corner message) with an OK button, and that clicking outside the popup also dismisses it.
- [ ] Select Card and confirm the Create Booking button changes to "Pay on Terminal" and names the specific terminal.
- [ ] Complete the Card payment on the terminal.
  Confirm the same "Booking Confirmed" popup appears once payment is approved.
- [ ] Start a Card booking payment, then press Cancel Payment before/while it is processing.
  Confirm the Create Booking button is re-enabled and shows its normal label again, not stuck on "Creating…".

- [ ] Open the Book Pooja popup again and tap "Custom Pooja".
  Confirm you can type a free-text description and set your own fee, then complete the booking.
- [ ] Try leaving Priest on Auto-assign vs explicitly choosing "Preferred priest" and picking a specific priest — confirm both complete the booking (priest assignment is optional).
- [ ] Check the devotee's email inbox for this booking.
  Confirm ONLY ONE email arrived (the confirmation) — not a second "needs attention" email as well.
- [ ] Open that confirmation email.
  Confirm it has a PDF attachment, and the PDF clearly shows: Booking ID, devotee name, date/time, priest (if any), pooja description, your Participant Details text, payment method, and Paid/Due amounts — marked fully Paid with Due = 0.00 for a Cash/Card/Counter booking.

4. Pooja Portal — Manage Bookings

Creating and managing a booking from the admin Pooja Portal (not the POS).

- [ ] Log in as an Admin/staff user with Portal access and open Manage Bookings.
- [ ] Confirm the filter row shows the Search box first, followed by Booking Status, Pooja Mode, and Booking Date filters.
- [ ] Click "Create Booking", fill in a pooja, date/time, devotee details and Participant Details, and submit.
- [ ] Confirm the new booking appears in the list immediately with status Confirmed, and the Participant Details note is visible on the row.
- [ ] Click the "Receipt" link/icon for that booking.
  Confirm it opens the receipt — this used to incorrectly show "Unauthorized action" for non-Admin staff; confirm it now works for any staff role permitted to view bookings.
- [ ] As the owning devotee (log in as that devotee, or ask them to check), confirm they can also open their own booking's receipt from their dashboard.
- [ ] As a different/unrelated devotee, confirm you CANNOT open someone else's booking receipt.
- [ ] Check the devotee's email for the booking created from the Portal.
  Confirm only one confirmation email arrived, with the same PDF receipt details as Section 3.
- [ ] Try reassigning the priest on an existing booking and confirm it saves correctly.
- [ ] Try updating a booking's status (e.g. mark Completed) and confirm the status badge updates.

5. Public Booking Page (No Login)

URL: test.hasq.org/book-a-pooja — the no-login public entry point.

- [ ] Open test.hasq.org/book-a-pooja in a private/incognito window (make sure you are NOT logged in).
- [ ] Confirm the page loads and lists bookable poojas with their prices.
- [ ] Select a pooja, choose a date/time, and fill in your name, mobile and email.
- [ ] Submit the booking.
  Confirm it succeeds and shows a clear confirmation message on screen.

- [ ] Check the ADMIN inbox (not the devotee's).
  Confirm the admin "needs attention" email arrives for this booking — this is the one case where that email is correct, since nobody has vetted the booking yet.
- [ ] Confirm the devotee does NOT yet receive a confirmation email at this point (the booking is still Pending).
- [ ] Log in as Admin, find the new Pending booking in Manage Bookings, and use "Confirm & Send Email".
- [ ] Check the devotee's inbox.
  Confirm they now receive ONE confirmation email with the PDF attached, correctly showing Pending/Due details if unpaid, or Paid details if already paid.
- [ ] Submit a second public booking using the SAME email address as an existing devotee account.
  Confirm it reuses that same account rather than creating a duplicate.

Found something not matching what's described here? Note the exact step, what you expected, and what actually happened — that's all that's needed to track it down.
