SRI SELVA VINAYAKAR KOYIL · COUNTER & ADMIN REFERENCE

SievesPOS User Guide

Everything a counter volunteer needs to take a donation, and everything an admin needs to set up and run the counters.

01 Counter Staff

02 POS Admin

PART ONE

For Counter Staff

The three things you'll use every shift: signing in fast, and recording a donation.

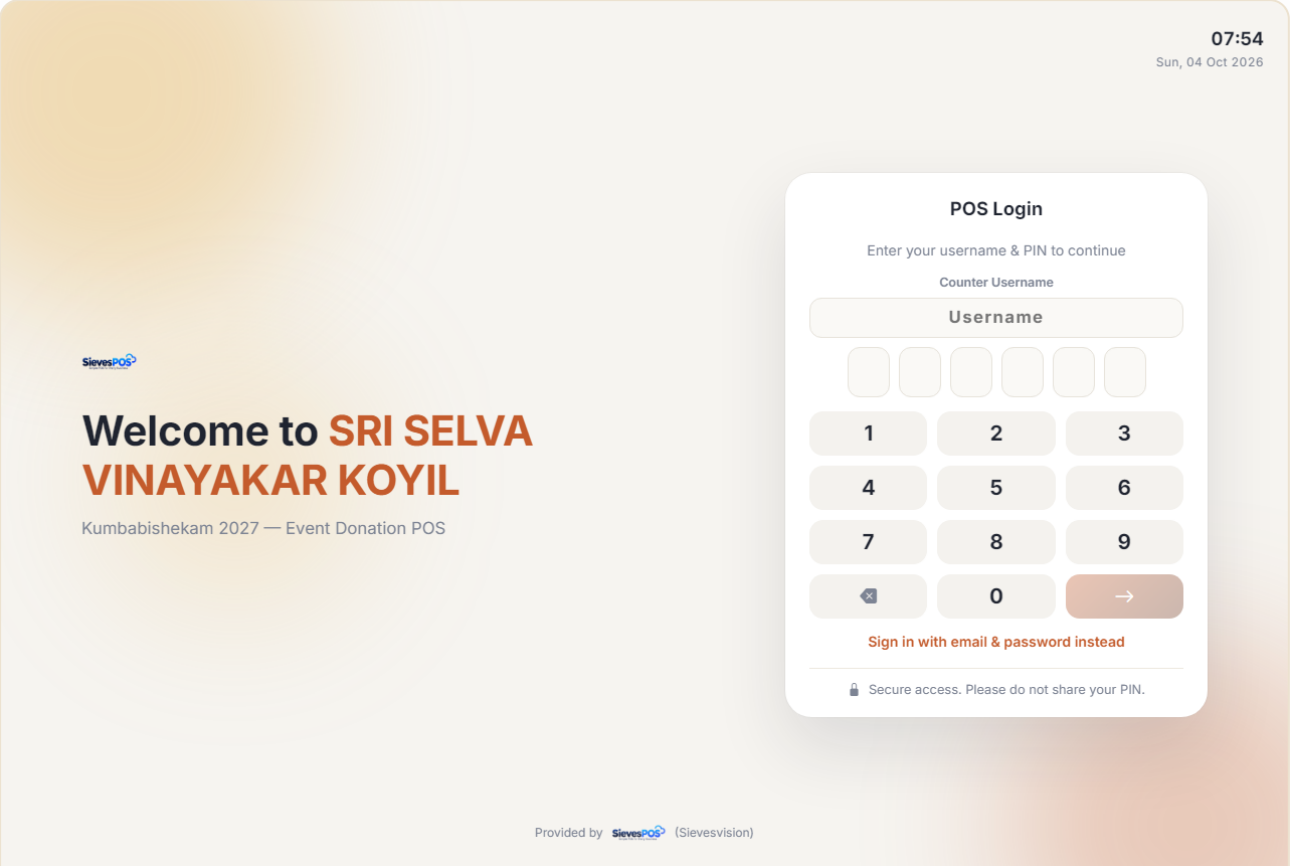

- **Signing In — PIN Login**
- **Signing In — Email & Password (backup)**
- **Recording a Donation**

COUNTER STAFF

1 Signing In — PIN Login

The fast way in. No typing a full email and password every shift.

- Open your counter's bookmarked link (ask your admin if you don't have one — it looks like **hasq.org/pos/login/event/<event-name>**).
- Type your **Counter Username** in the box at the top of the card.
- Tap your **6-digit PIN** on the keypad — it submits itself the instant the 6th digit is entered, no need to press anything else.
- You're straight into the donation screen for your counter.

The PIN login screen — username first, then the keypad

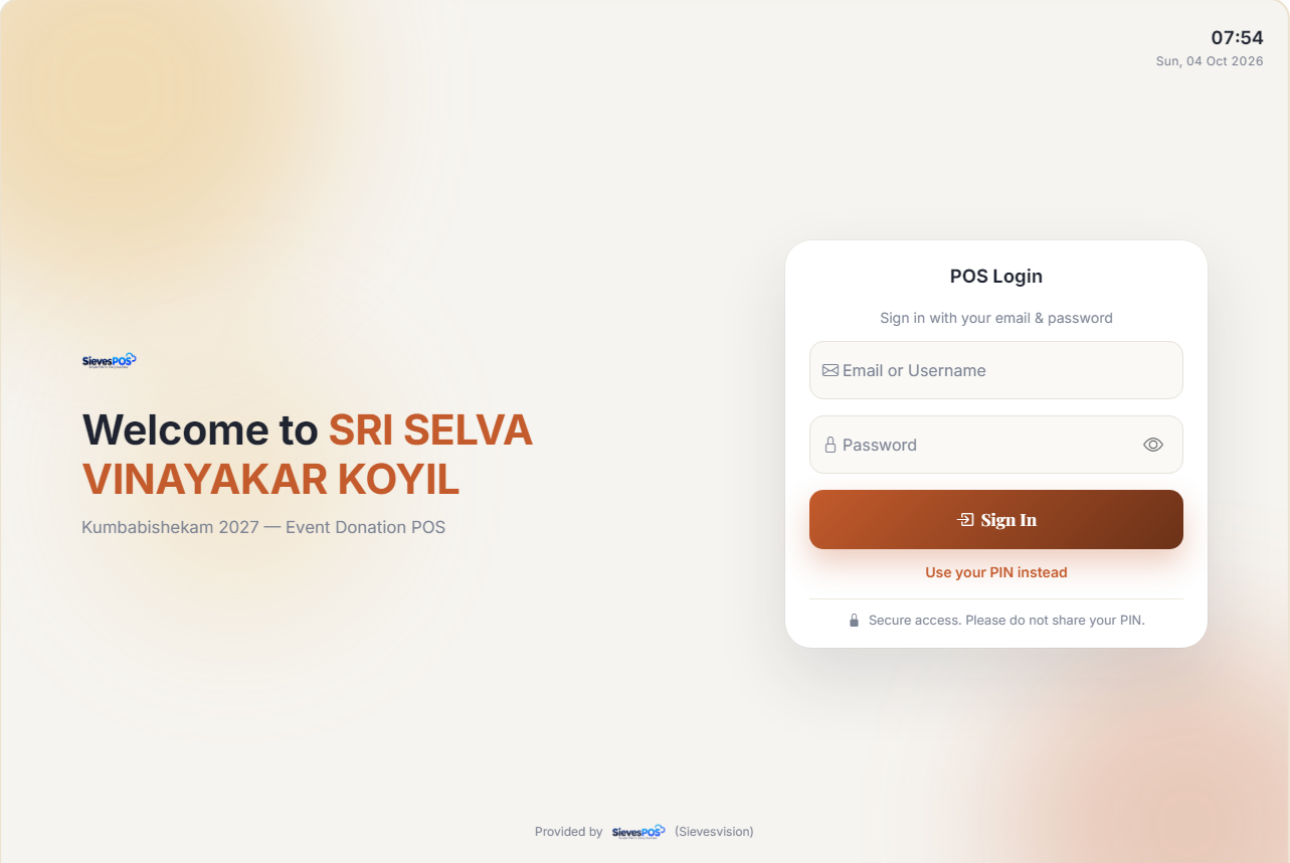

Don't have a username or PIN yet? Ask your event admin — see "Assigning a Username & PIN" in Part Two.

COUNTER STAFF

2 Signing In — Email & Password

A backup for anyone without a PIN yet, or whose PIN has been locked after too many wrong attempts.

- On the login screen, tap **"Sign in with email & password instead"** underneath the keypad.
- Enter your **email address** (or your username) and your **account password**.
- Tap **Sign In**.
- You'll land on the exact same donation screen as a PIN login would take you to.

The email & password fallback panel

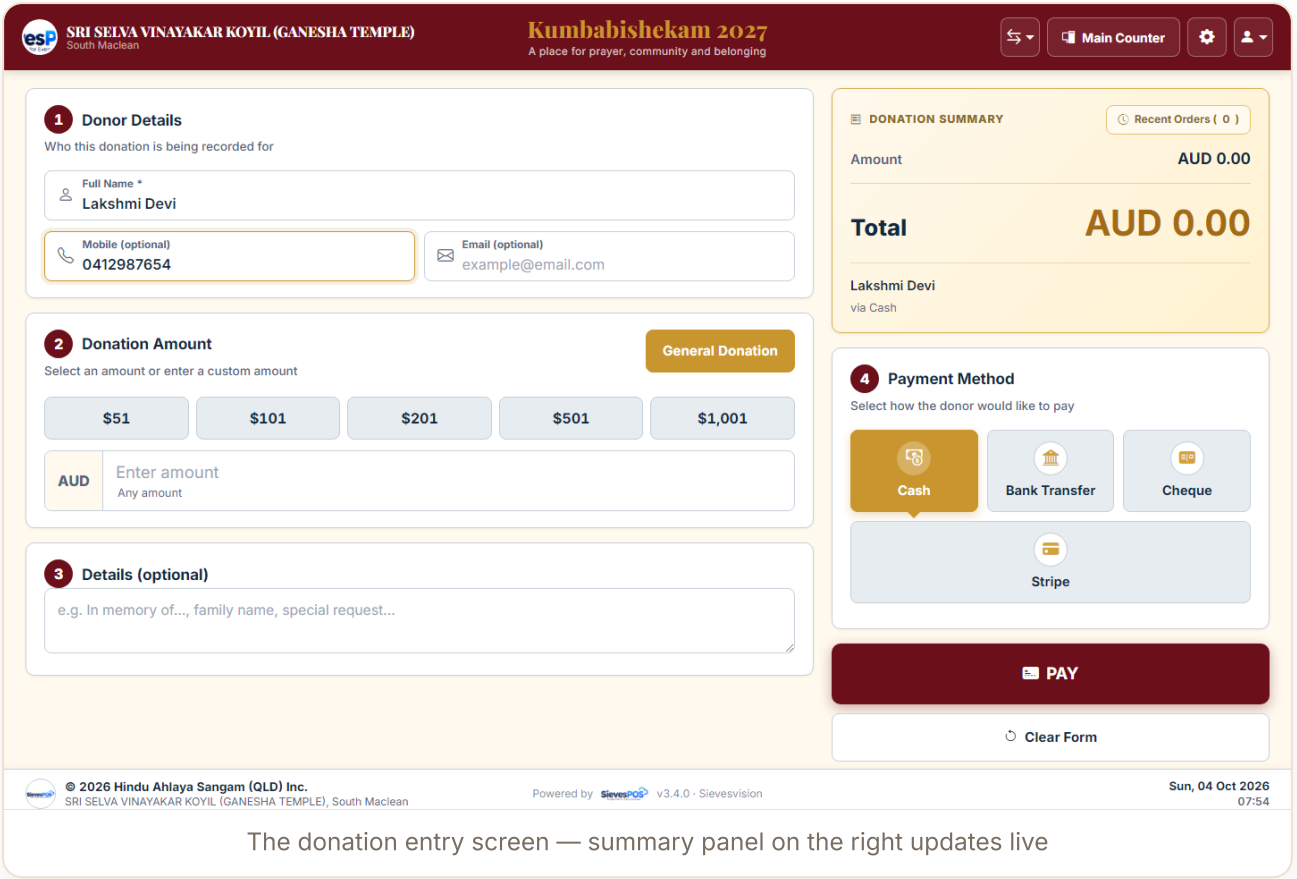

Signing in this way also automatically clears a locked-out PIN, so you don't need to wait for an admin if you remember your password.

COUNTER STAFF

3 Recording a Donation

One screen, four quick steps — donor details, amount, notes, and payment.

- **Donor Details:** enter the donor's full name (required); mobile and email are optional, but add them if the donor wants a receipt emailed.
- **Donation Amount:** tap a preset amount, or type a custom one in the AUD box.
- **Details (optional):** add a dedication or note if the donor asks for one.
- **Payment Method:** choose Cash, Bank Transfer, Cheque, or EFT Terminal, then tap **PAY**.

The donation entry screen — summary panel on the right updates live

Cash and Bank Transfer show a clear on-screen confirmation once recorded — it closes itself, or tap anywhere to dismiss it sooner. EFT Terminal walks the donor through tapping/inserting their card.

Bank Transfer donations are recorded as **Pending** until an admin confirms the money actually arrived — see "Approving Cash & Bank Transfer Donations" in Part Two.

PART TWO

For POS Admins

Everything needed to run the counters day-to-day: confirming pending donations, managing who has access, and keeping the card terminals paired.

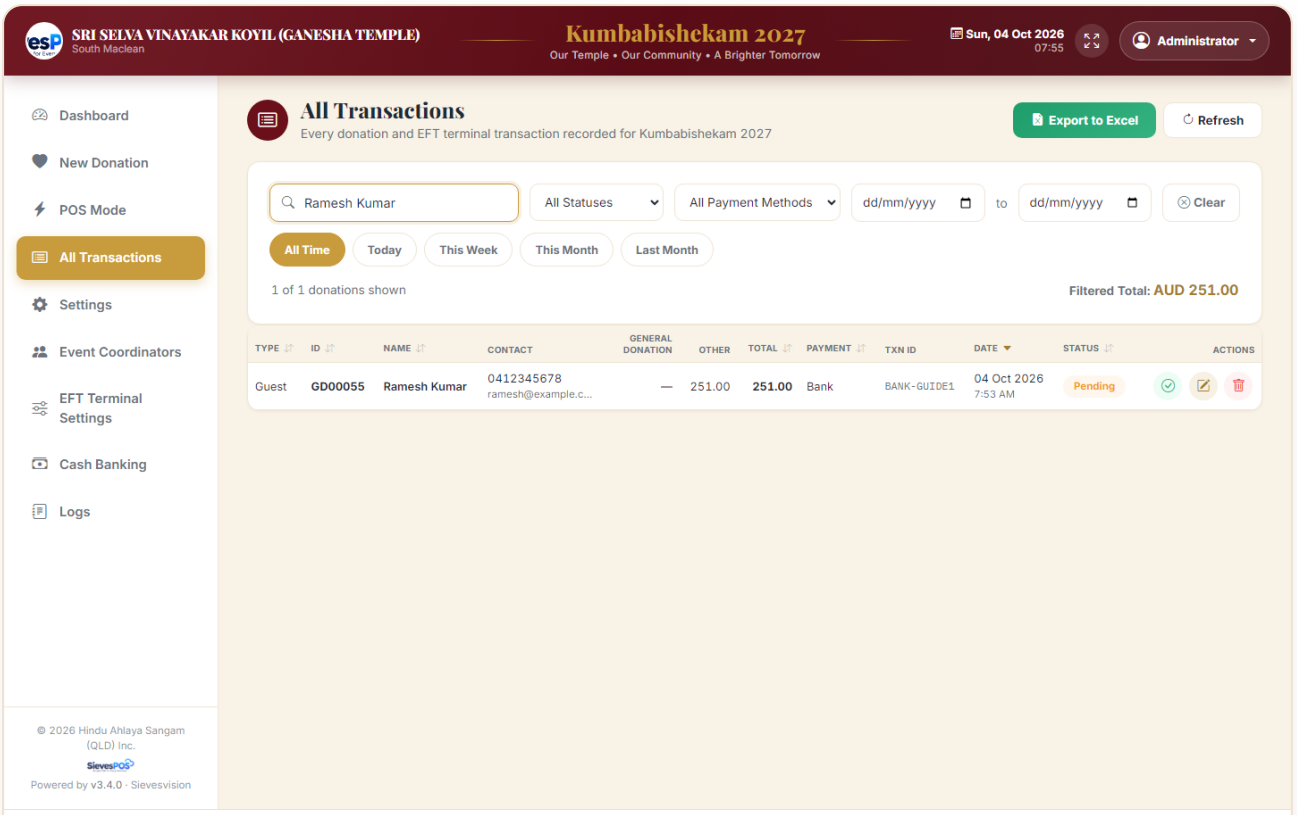

- **Approving Cash & Bank Transfer Donations**
- **Managing Event Coordinators**
- **Assigning a Username & PIN**
- **Adding a New User**
- **EFT Terminal Management**

POS ADMIN

1 Approving Cash & Bank Transfer Donations

Donations submitted through the public donation form on the website (and Bank Transfer donations recorded at the counter) sit as **Pending** until someone confirms the money was actually received.

- Open the event's **Console**, then the **All Transactions** pane from the sidebar.
- Use the search box or the **Pending** status filter to find the donation.
- Tap the green ✓ (checkmark) action on that row, then confirm.
- The donation status changes to **Paid**, and the donor's official receipt email goes out automatically.

A Pending Bank Transfer donation, ready to approve

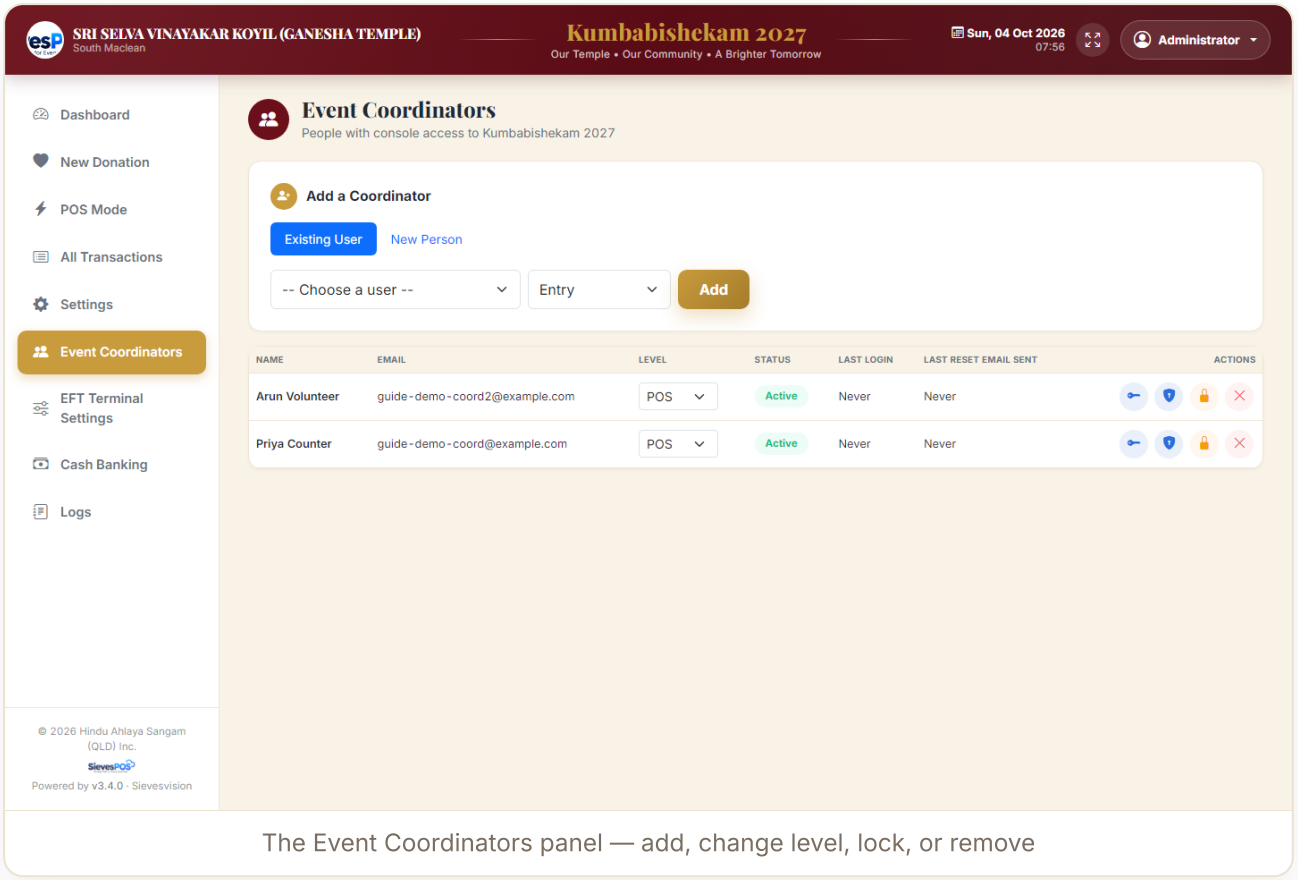

Only approve once you've actually verified the money arrived — checked the bank statement for a transfer, or confirmed cash was handed over. This action cannot be "un-approved" from here.

POS ADMIN

2 Managing Event Coordinators

Everyone who can access this event's console or counter is listed here, along with their access level.

- Open the event's **Console**, then **Event Coordinators** from the sidebar.
- To add someone already in the system, use the **Existing User** tab, pick them from the list, choose a level, and tap **Add**.
- To add someone brand new, use the **New Person** tab instead — see "Adding a New User" below.
- Change anyone's level anytime from the dropdown in their row; lock, reset their password, or remove their access using the icons on the right.

The Event Coordinators panel — add, change level, lock, or remove

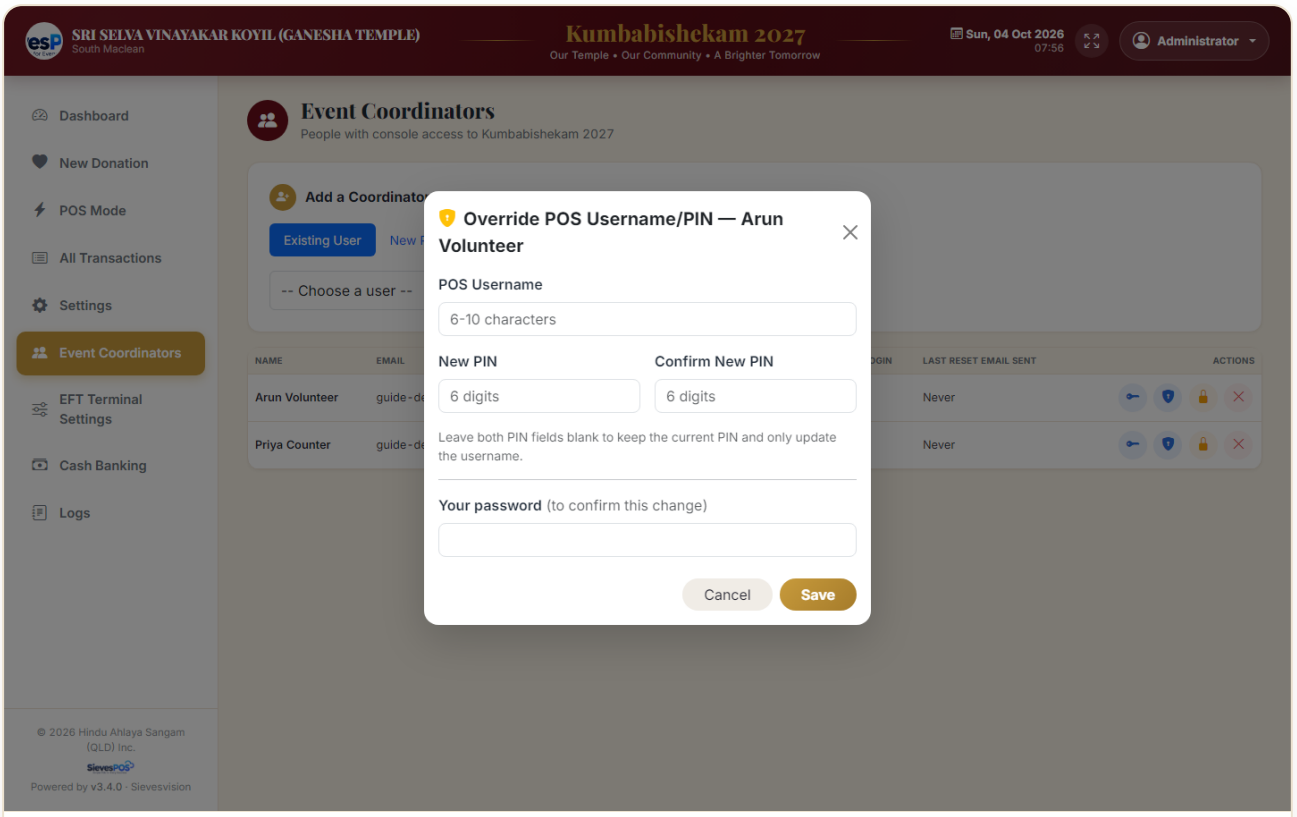

Access levels: View (read-only), Entry/POS (can record and edit donations), Admin (full control of the event, including this page). POS-level coordinators only ever see the counter screen, never the full console.

POS ADMIN

3 Assigning a Username & PIN

A coordinator needs both a username and a PIN before they can use the fast PIN login at the counter.

- From the Event Coordinators list, tap the shield icon on that person's row — **Override POS Username/PIN**.
- Type a **username** (6–10 letters/numbers) — this is what they'll type before their PIN.
- Type a **6-digit PIN** and confirm it, or leave both PIN fields blank to just change the username.
- Enter **your own** account password at the bottom to confirm the change, then tap **Save**.

Setting a username and PIN on a coordinator's behalf

This always asks for the admin's own password, never the coordinator's — it's exactly how an admin resets a PIN for someone who's forgotten theirs. The coordinator can also set their own PIN later from the counter screen's account menu.

POS ADMIN

4 Adding a New User

Bringing on someone who doesn't have an account yet — a new volunteer, counter staff member, or coordinator.

- From Event Coordinators, open the **New Person** tab (next to Existing User).
- Fill in their **Full Name**, **Email**, and **Mobile** number.
- Choose their **Access Level** (Entry is the usual default for new counter staff).
- Tap **Create & Add** — they're emailed a link to set their own password, and are added to this event straight away.

Once their account exists, follow "Assigning a Username & PIN" above to set them up with fast counter login too.

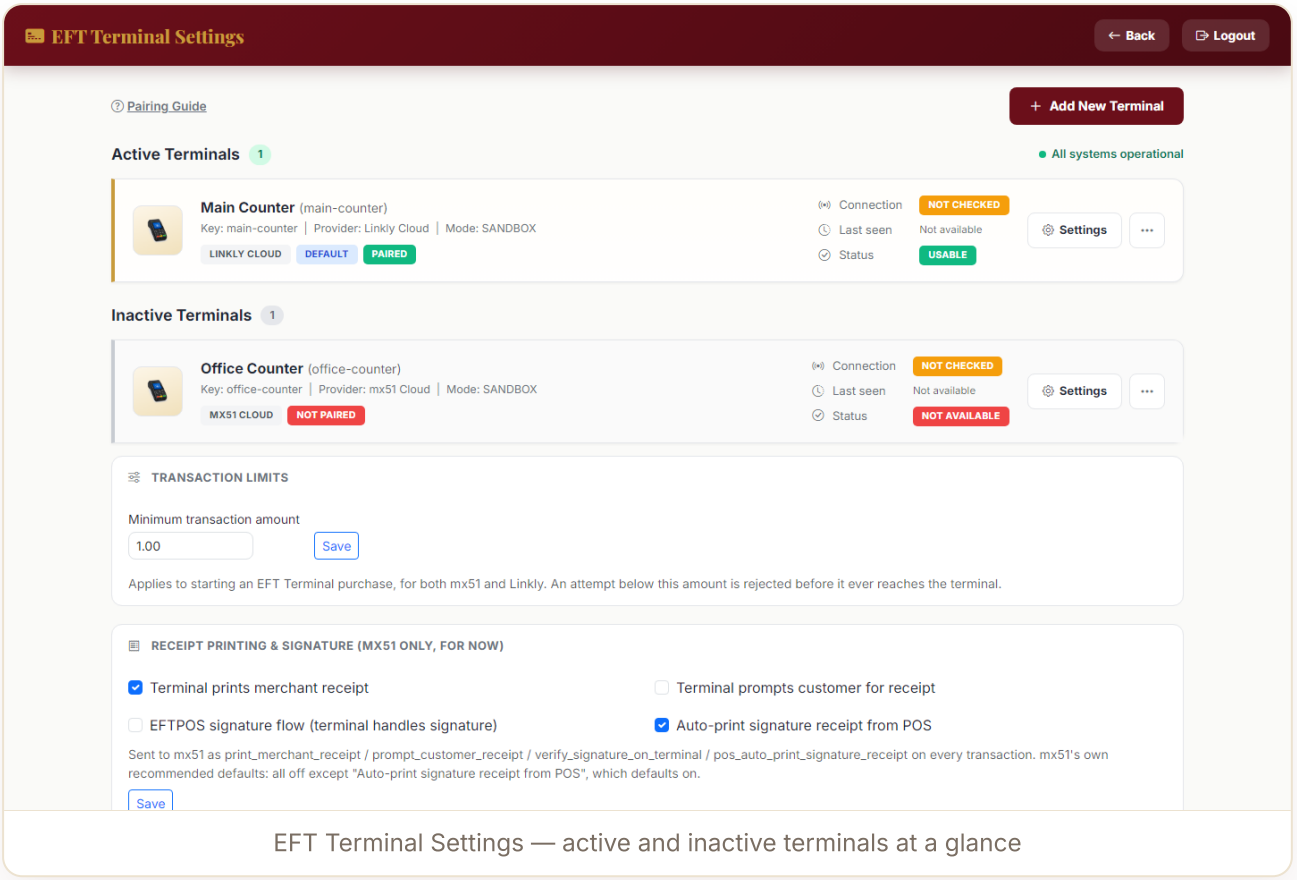

If their email or mobile already matches an existing account, that existing account is granted access instead of creating a duplicate — useful for adding someone who already coordinates a different event.

POS ADMIN

5 EFT Terminal Management

Every card machine used across every event and the ticket counter is registered and paired from one place.

- Open **EFT Terminal Settings** from any console sidebar, or the Account menu on a counter screen.
- Each terminal shows its **connection status**, when it was **last seen**, and whether it's currently **usable**.
- Use **Settings** on a terminal's row to re-pair it, or the **…** menu for more options.
- Transaction limits and mx51 receipt/signature preferences are set further down this same page.

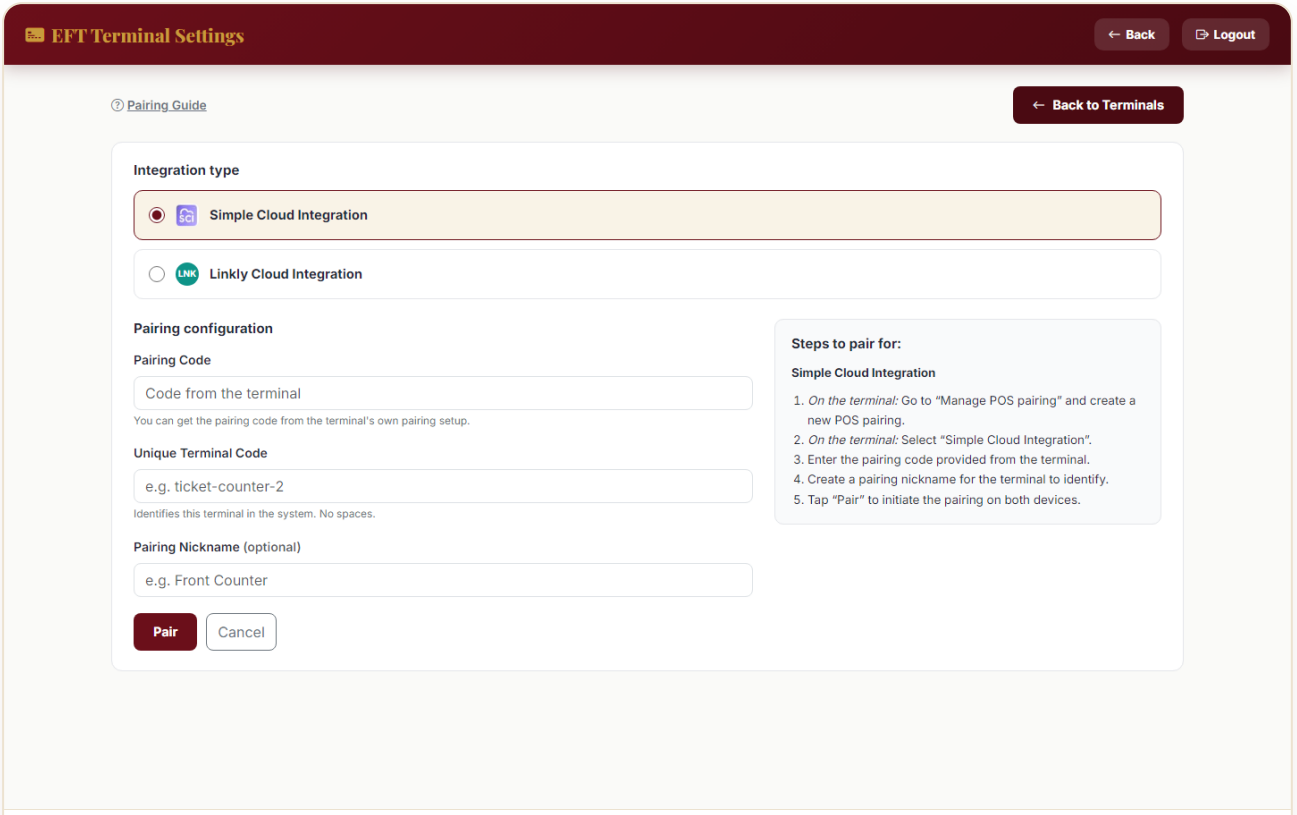

EFT Terminal Settings — active and inactive terminals at a glance

POS ADMIN

6 Pairing a New Terminal

A one-time job whenever a new card machine joins the temple.

- From EFT Terminal Settings, tap **+ Add New Terminal**.
- Choose the integration type — **Simple Cloud Integration** (mx51) or **Linkly Cloud Integration**, matching the physical terminal.
- *On the terminal itself:* start a new POS pairing and select the matching integration type to get a **pairing code**.
- Enter that code, a short **unique terminal code** (no spaces), and an optional nickname, then tap **Pair**.
- Confirm on the terminal when prompted — it then appears in every terminal picker across the system immediately.

Pairing a new terminal — the on-screen steps match the terminal's own prompts

Lost or replacing a terminal? Unpair the old one first (from its row's … menu) before pairing its replacement with the same terminal code.
